PhpStorm interpreter

Open Settings

Open settings
from here
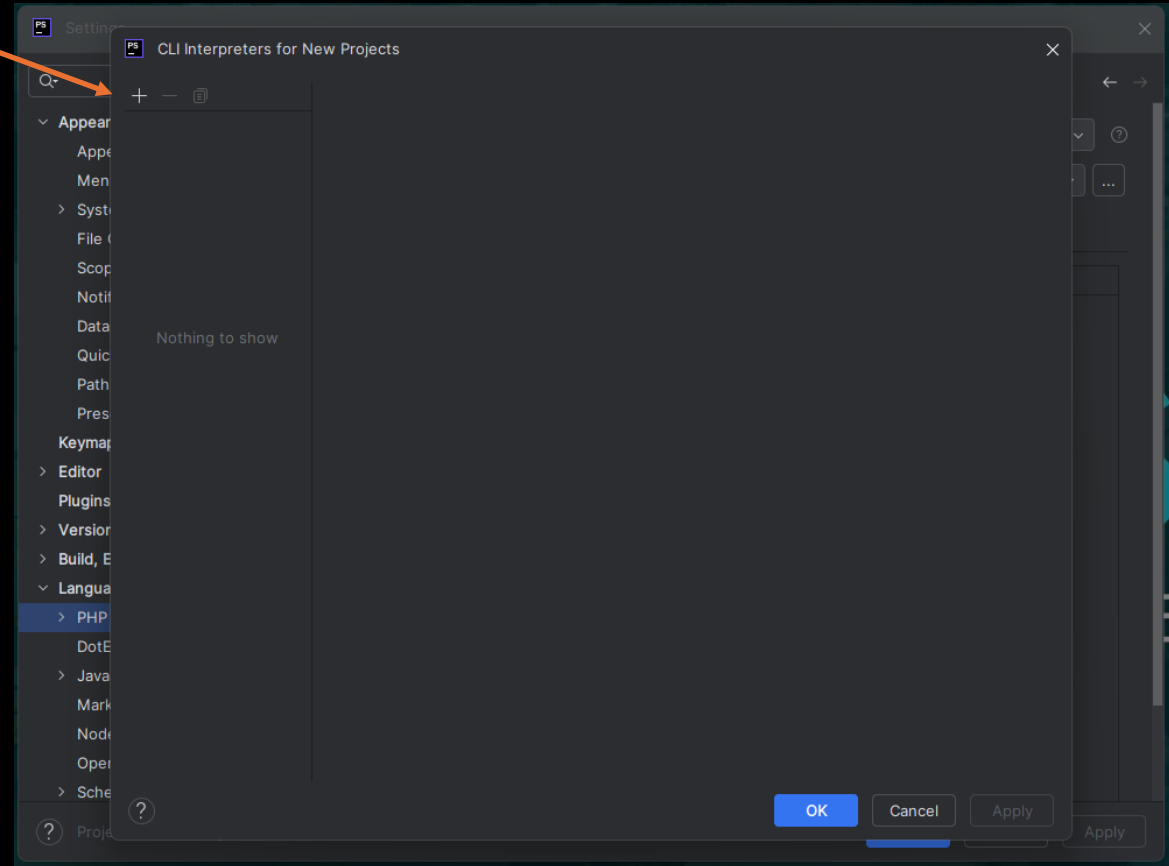

Navigate to PHP screen

1. Under "Languages & Frameworks"
Click "PHP" to get this screen
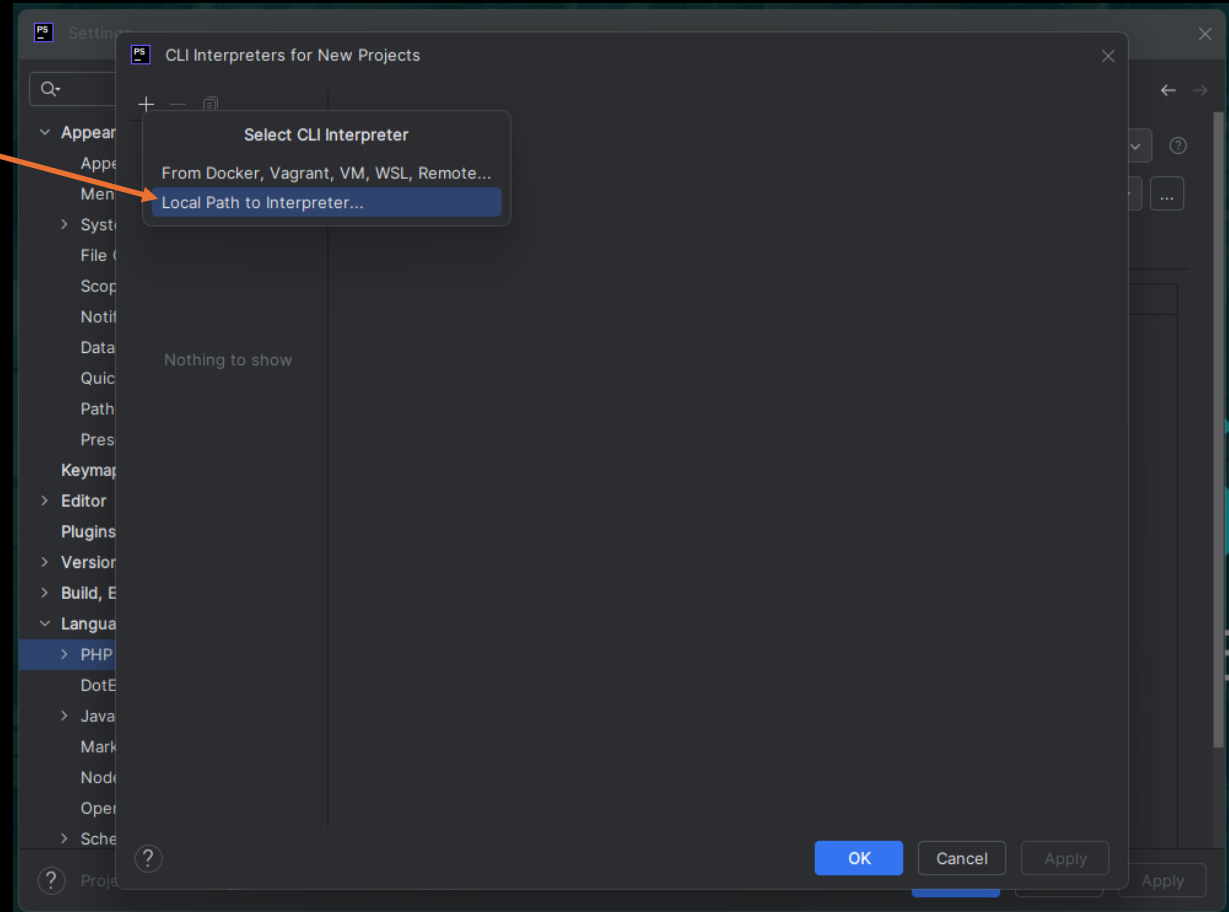

2. Then click the 3 dots

Add the Laragon interpreter
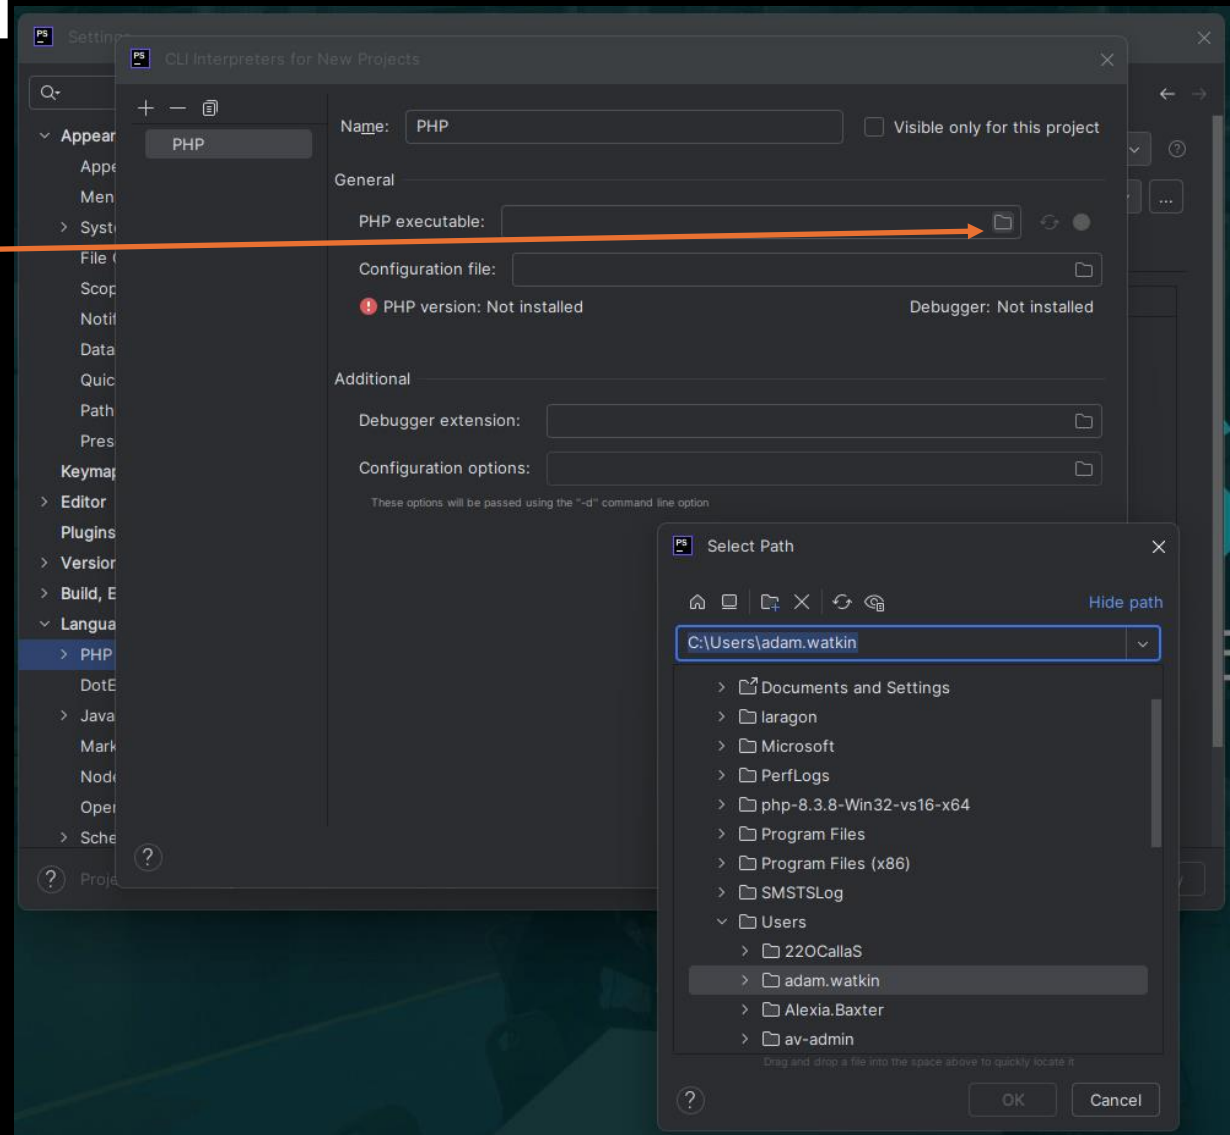

Click on the "+" button

Local path to interpreter

Click this option

Open the file browser

Click here to open the "Select Path" window

Locate the exe

Navigate here:

Locate the XAMPP or XAMPP1
Folder

Then the php folder

Then the php.exe, select it and

Click ok

Apply and ok

Once the executable
appears here, click
"Apply" and then "ok"

Then close settings and
You are ready to code.
